

Rx Prescribe The Solution!

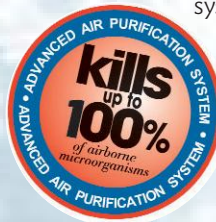

The Advanced Air Purification™ system that traps airborne particulates and kills microorganisms that cause allergies and illness.

The system that far exceeds HEPA type filtration. Overtime a HEPA filter can breed bacteria, mold and other microorganisms, that can grow within the filter and disperse back into the air. Now, by using HealthWay's patented *Advanced Air Purification System with EMF Technology* there isn't a chance that these harmful microorganisms are passed back into the environment!

EMF Technology is not a filter - but a filtration system. The EMF filtration system has superior media filtration to capture contaminant's that are 0.3 microns in size in the air, but here is where the patented technology comes in: within the sealed EMF

system a high energy field is constantly maintained. This high energy field raises the performance of the media filter in the system to achieve 99.99% capture efficiency.

This surpasses any HEPA filtration system.

But that's not all! The most revolutionary feature of the system is the constantly maintained high energy field that kills airborne viruses, bacteria, mold and fungi spores. That is **CERTIFIED** destruction of 94-100% of active airborne microorganisms!

- 2005 NASA Technology SBIR Award
- National R&D 100 Award

Absolute Allergy and Asthma Relief!

Electronic Control Panel -

- Main Filter Light- Monitors filter efficiency and indicates when to replace filter.
- Bio-Monitor light- Shows EMF Germ killing zone is working at peak efficiency.
- Convenient three speed control.

Activated Carbon Post Filters -

Removes common indoor odors for up to 6 months.

Revolutionary FDA listed GERM KILLING ZONE!

Certified Destroy Rates

- 99-100% of viruses.
- 98-100% of bacteria.
- 94-100% of mold & fungi.

100% sealed Filtration -

All incoming air is treated in the 100% sealed filter. 4x the particle capture as a similar sized HEPA.

Filter Efficiency Monitor -

Measures the efficiency of the filter by pressure differential.

Dual Air Intake Blower -

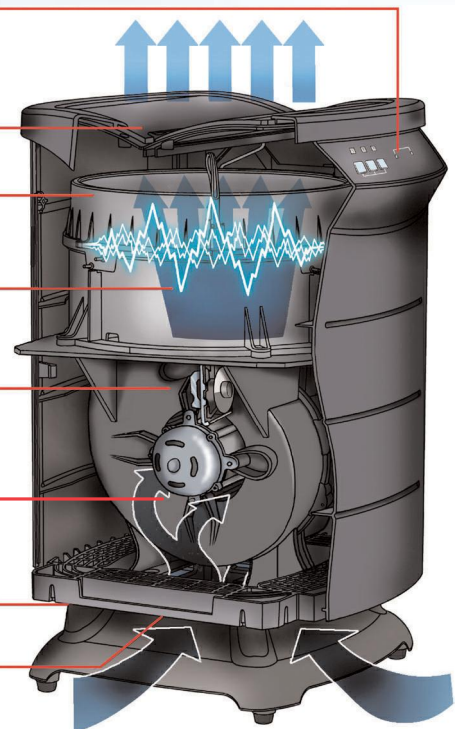

Drives a consistent volume of air and provides quiet operation.

Permanent Cleanable prefilter -

to prolong the life of the main filter the prefilter can be easily cleaned or vacuumed.

360 Degree air intake

allows placement anywhere ensuring all room air is treated.
